Solutions.

For perfect bale wrapping.

Efficient and convenient bale wrapping

Unterland Flexible Packaging GmbH is one of the leading producers of high-quality plastic films, offering the agricultural sector innovative, high-end stretch films for wrapping of silage bales.

Thanks to our ongoing R&D, we are now offering improved film quality:

Agristretch Extra Plus

All the familiar advantages of this innovative co-extruded 3-layer film, now with improved unwinding characteristics and greater temperature stability. Agristretch Extra Plus: for contractors' and farmers' increasing demands.

Advantages of the optimized quality of Agristretch Extra Plus

- **Enhanced unwinding properties**
- **Greater temperature stability**

Agristretch Extra Plus still offers all the familiar advantages of Unterland's high-end Agristretch films:

- **Excellent protection against water thanks to ideal adhesion**

Optimally sealed bales thanks to the sealing effect. Smooth, overlapping edges prevent water from penetrating into film plies.

- **Easy handling of silage bales**

No annoying stickiness any longer. The special, gliding surface makes handling of the bales easier.

- **Less residue on the stretch unit**

The new, one-sided gluing system reduces residue on your stretch unit and therefore allows for perfect pre-stretching.

- **Greater yield**

The optimized stretch performance guarantees an especially high yield.

- **Excellent oxygen barrier**

The special production using a blown process with selected types of raw materials gives the film its imperviousness to oxygen.

Quality & Service

As an industry leader, Unterland is focussed on quality. Raw materials and finished products are assessed on an ongoing basis in our in-house lab to ensure very high quality standards. Every roll core has its own serial number, to allow easy tracing of problems.

Our application technology is of course available to you at any time.
